

Plastrix Synthetic Matrix

CCM's Plastrix is more durable, has more sizes and an improved adhesive and applicator!

CCM's Plastrix is the tough synthetic matrix that offers longer runs and reliable performance, run and after run. Plastrix features a tough PVC body with a film base that maintains crease consistency throughout the run. An improved adhesive assures that Plastrix stays put securely, and precision bonded applicator allows for accurate application to the counter plate. Plastrix also has finger-lift release paper, that makes installation a breeze.

Plastrix features a lower, ultra-smooth profile with a chamfered edge, designed to provide smooth runs at today's faster press speeds. And our wide selection of sizes, means we have the exact Plastrix that's right for your application!

Plastrix is available in Standard and Mini (5 mm) for multiple creases in close proximity.

CCM Matrix Miter Pliers - register an exact mitered cut. Larger blade cuts the finger lift tape. Heavy duty enough to cut the largest metal-based matrix and gentle enough to cut small pieces!

CCM Bench Miter Press - This rugged bench miter press can miter two ends of matrix at one time! Reversible cutting anvil for long life. Guides for both 5 mm and 9 mm width matrix.

Multi-Cut Pliers - great for cutting any non-metallic matrix, an economic alternative to high cost cutters! Comes with 4 blades, and storage cartridge!
